
Tutorial: Dynamic causal modelling for fMRI

Birte Toussain, Jakob Heinzle
Translational Neuromodeling Unit (TNU),
Institute for Biomedical Engineering
University and ETH Zürich

CP Course 2021, Zürich, Switzerland

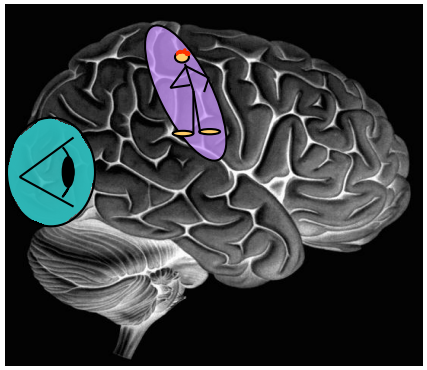
Our plan for today

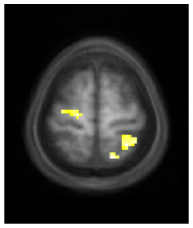
- Introduction
- Inverting our own DCM
  - Extracting the data
  - Setting up the model
  - Inversion
  - Model comparison
  - Looking at the results (parameters)
- Looking at group data
  - Setting up a group analysis in SPM (PEB)
  - Looking at parameters across groups.

Your questions …

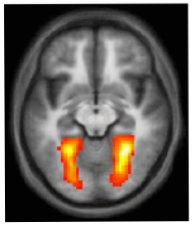
Specialisation vs. Integration

Functional Specialisation





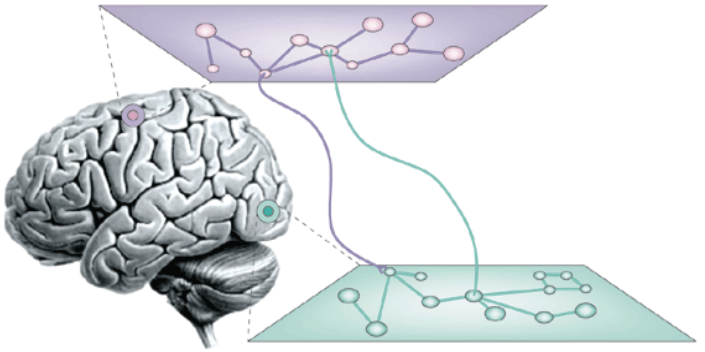
u_1

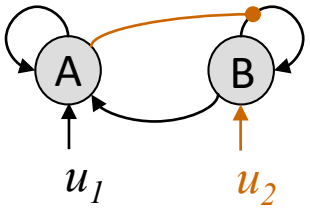


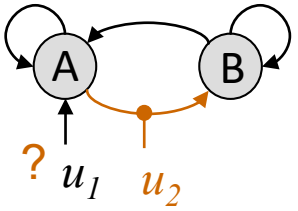
$u_1 X u_2$

*«**Where**, in the brain, did my experimental manipulation have **an effect**?»*

Functional Integration

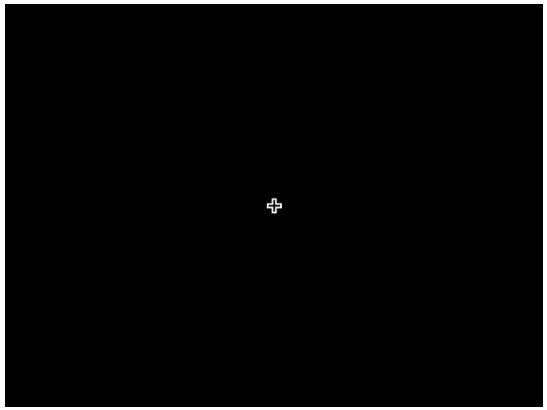






*«**How** did my experimental manipulation **propagate through the network**?»*

The experiment



Fixation

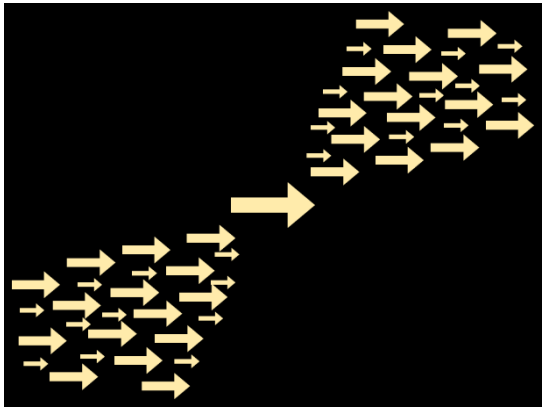
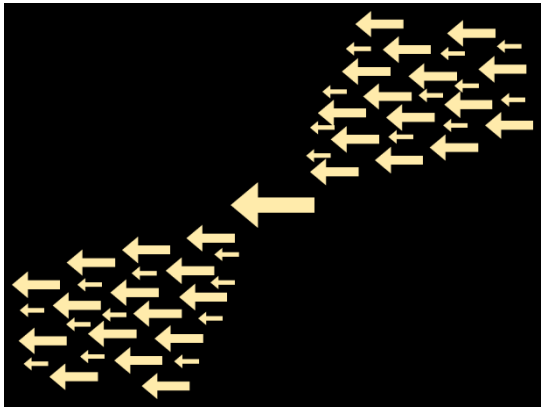
Wedge1



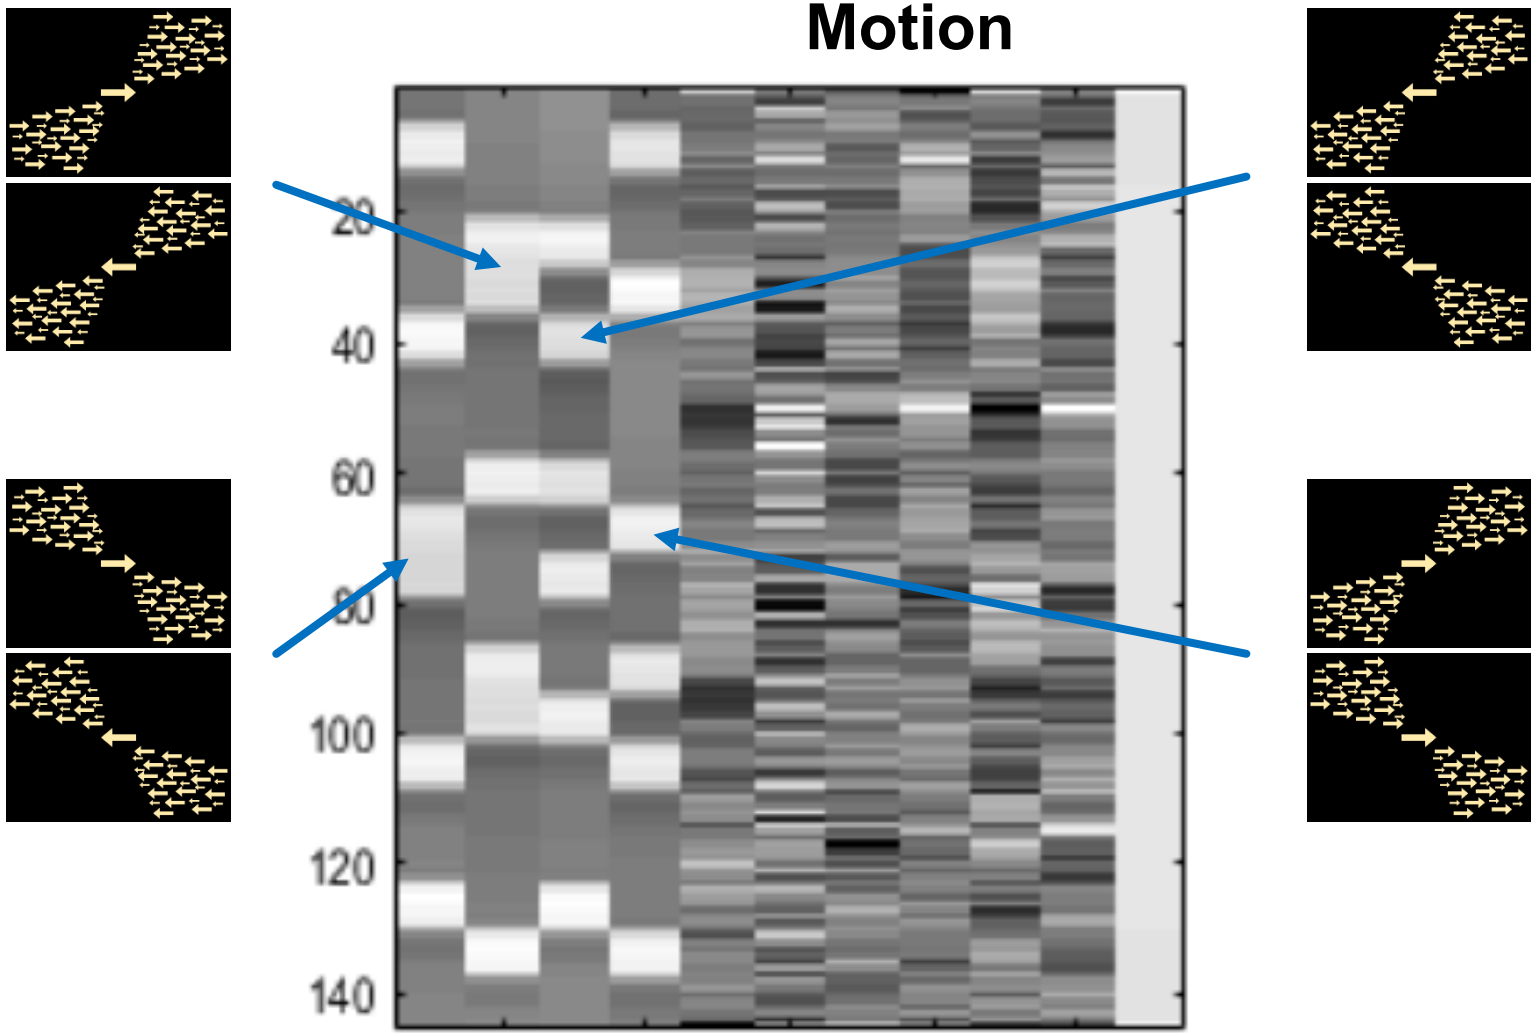
Press right



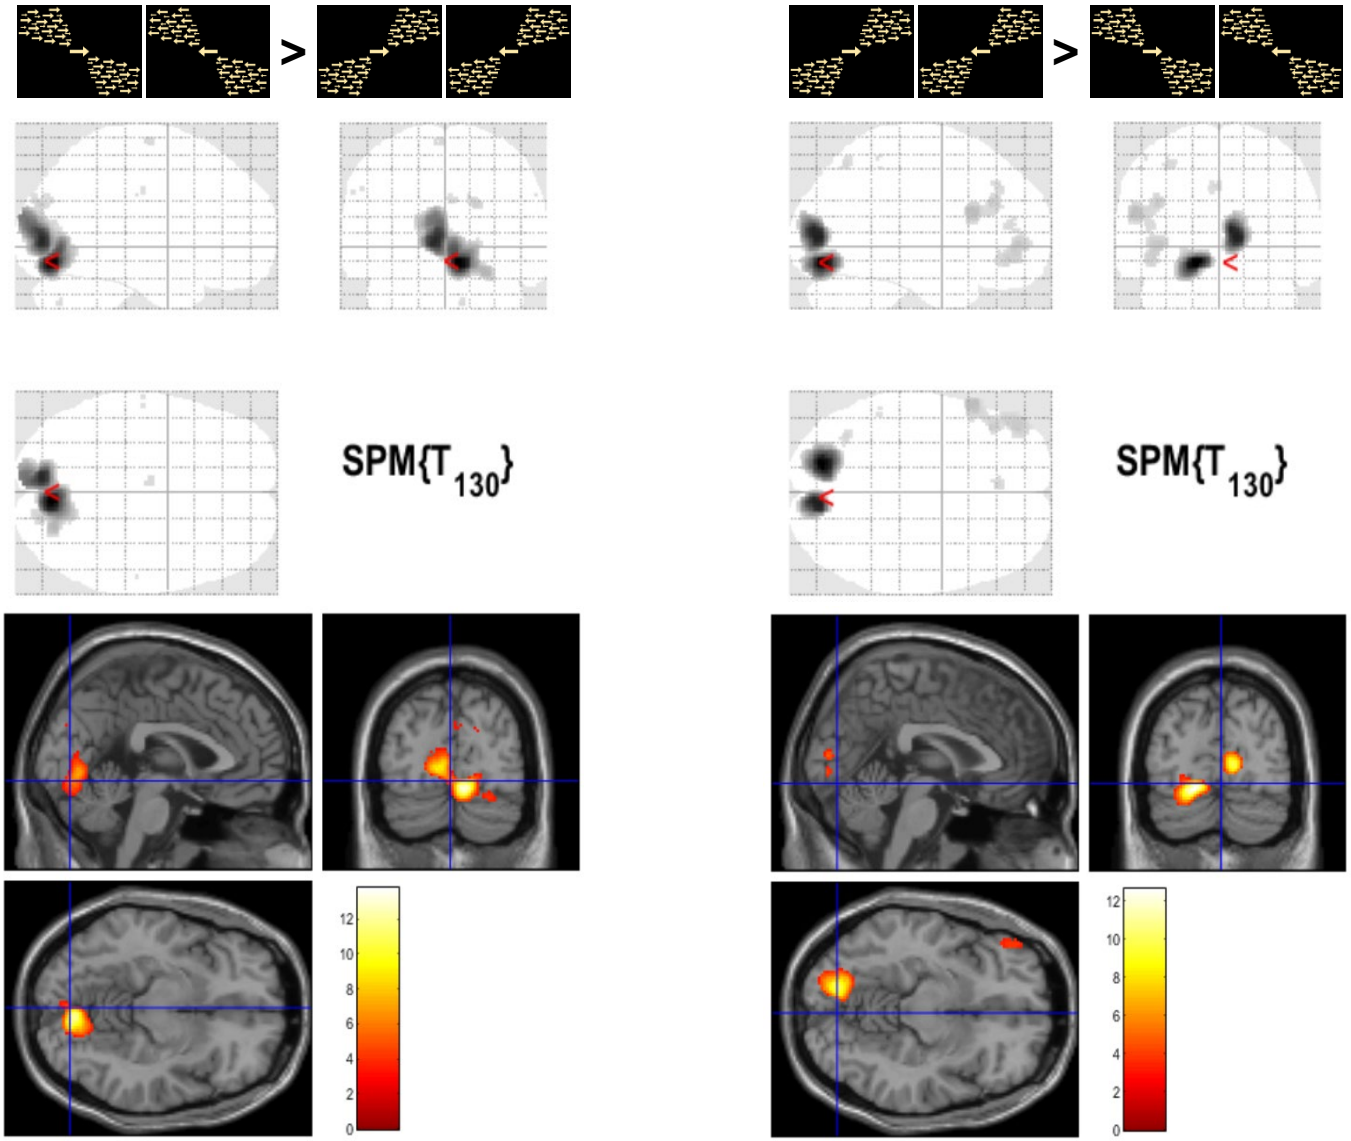
Press left

Top right wedge
Wedge2

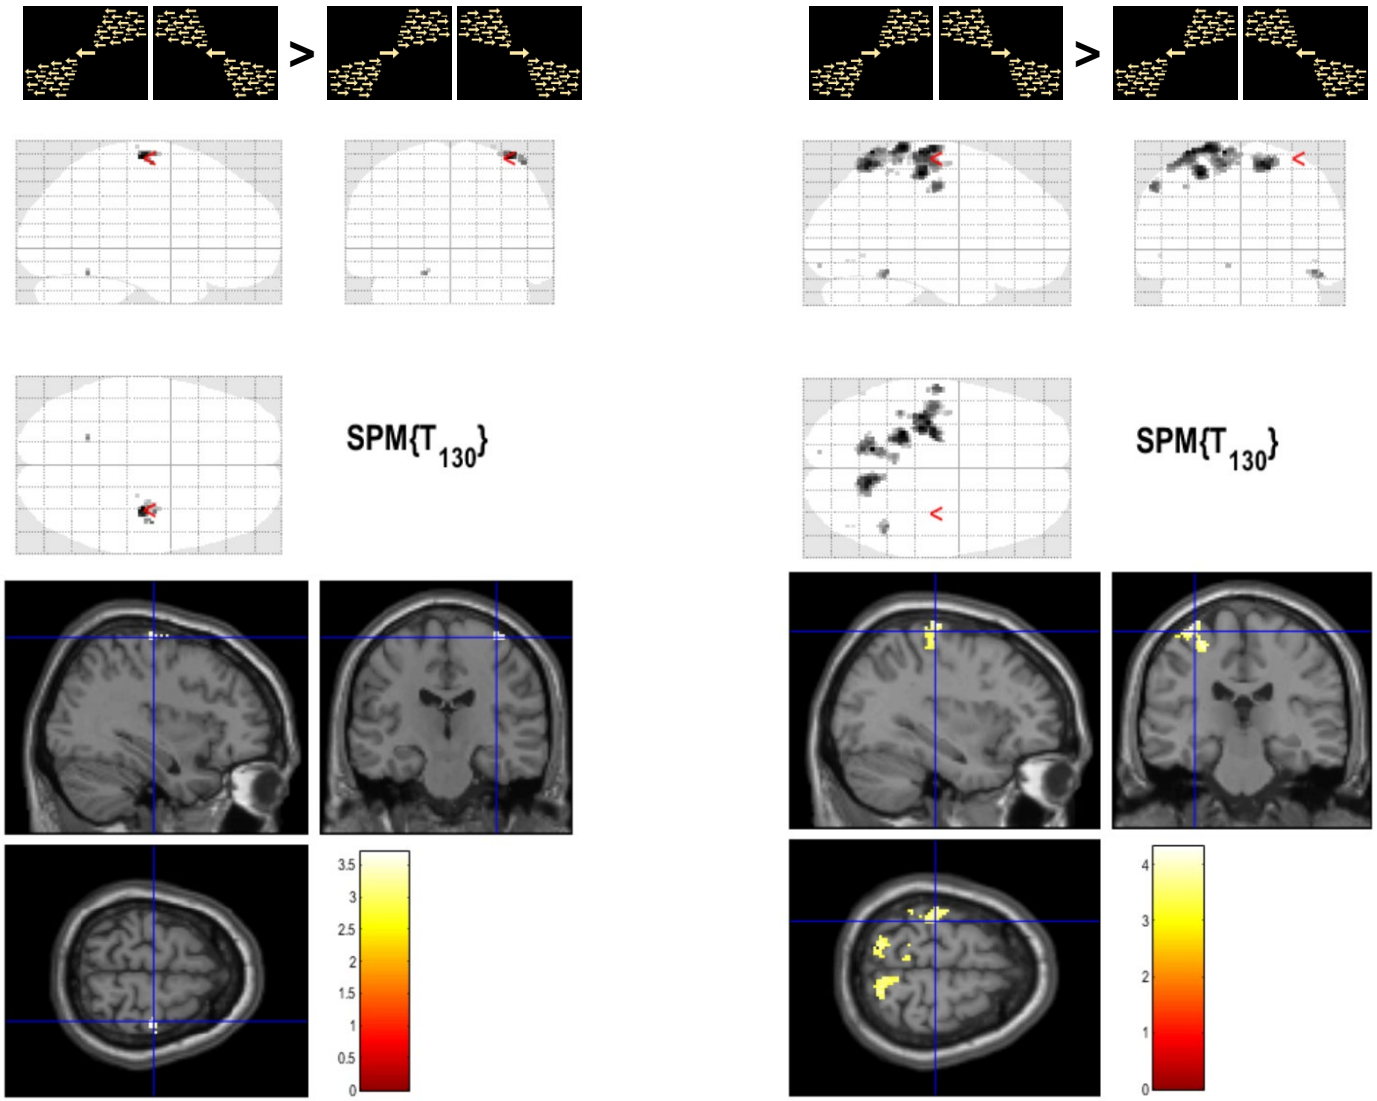
Modeling the design



Visual responses



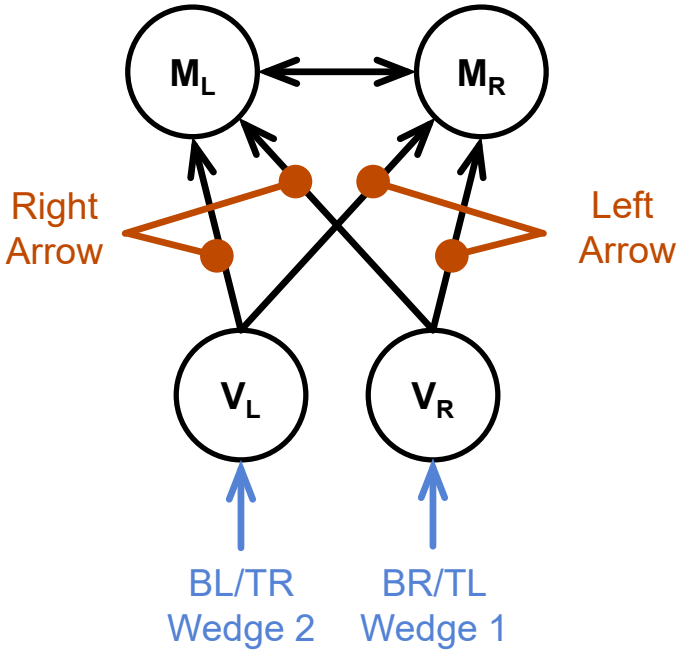
Motor responses



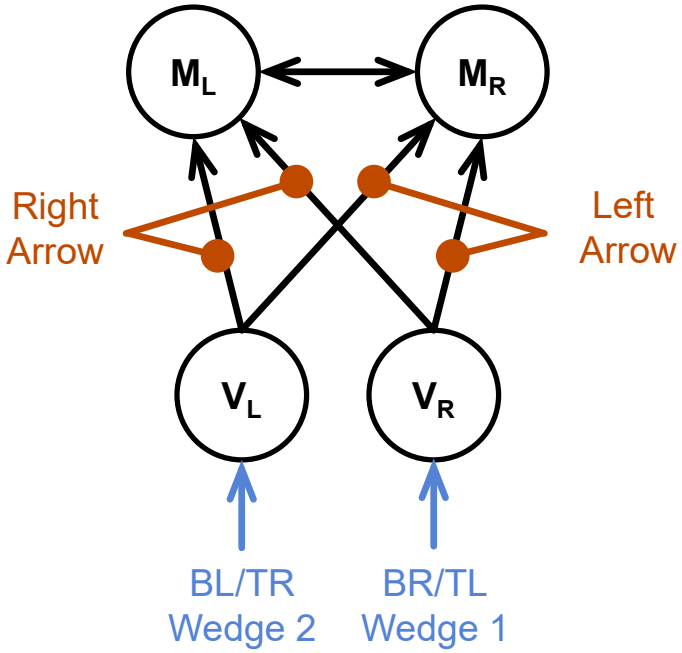
Neuronal state equations

A C B

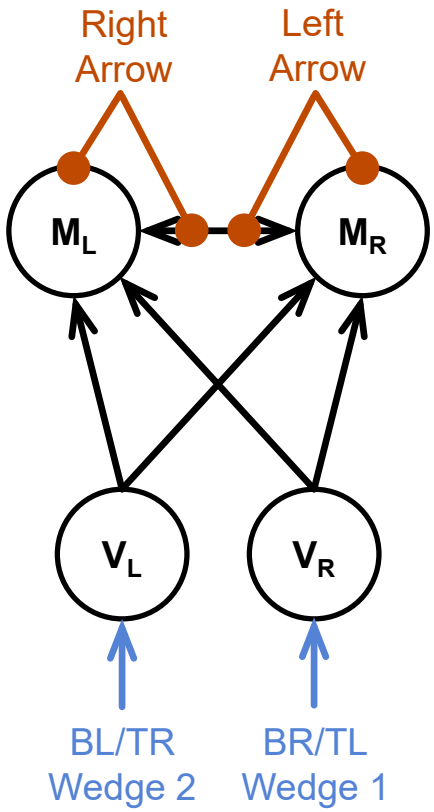
$$\frac{dx}{dt} = f(x,u) \approx f(x_0,0) + \frac{\partial f}{\partial x}x + \frac{\partial f}{\partial u}u + \frac{\partial^2 f}{\partial x \partial u}ux + \frac{\partial^2 f}{\partial x^2}\frac{x^2}{2} + \cdots$$



Model comparison



Model 1



Model 2

Our plan for today

- Introduction
- Inverting our own DCM
  - Extracting the data
  - Setting up the model
  - Inversion
  - Model comparison
  - Looking at the results (parameters)
- Looking at group data
  - Setting up a group analysis in SPM (PEB)
  - Looking at parameters across groups.
